### Abstract

This essay reviews recent developments in longitudinal studies of aging, focusing on the Wisconsin Longitudinal Study (WLS) and the Health and Retirement Study (HRS). Both studies are part of an international movement to

\* Prepared for the September 2009 Conference on Contemporary European and American Societies, Institute of European and American Studies, Academia Sinica, Taipei, Taiwan. Support for this research was provided by the National Institute on Aging (AG-9775 and AG-21079), the Vilas Estate Trust, and the Center for Demography of Health and Aging at the University of Wisconsin-Madison. The opinions expressed herein are those of the author. This paper partly reflects my collaborations and communications with Robert Willis and David Weir of the Health and Retirement Study and with Taissa S. Hauser, Carol Roan, and other staff and investigators of the Wisconsin Longitudinal Study. Parts of the text are drawn from Hauser and Willis (2005) and from a presentation by Weir to the RAND Summer Institute on the Demography of Aging, July 2009. A revised portion of this paper appears in *Demography*, Vol. 47(supplement), 2010, S 111-130.

establish longitudinal biosocial surveys—in which biological measurement is joined with traditional survey techniques—and a related trend toward greater harmonization across studies. Both studies have collected DNA samples and are working toward genotyping that would facilitate broadly based studies of genetic and environmental effects on behavioral and health outcomes. The studies have each also focused on improved measurement of personality and of adaptive measures of cognitive ability. The HRS has expanded its economic measurements to longitudinal trajectories of consumption and to broader-based measurement of pension and Social Security wealth. It has added biomarkers of cardiovascular risk. The WLS has developed an integrated approach to the study of death and bereavement and an innovative use of high school yearbook photographs to capture information about health early in the lives of its participants.
